

STEAM & COSMOS *festival* 09 TO 13 APRIL 2008

Sandstone Estates in the Eastern Free State of South Africa operates one of the largest collections of Narrow Gauge locomotives in the world. By public request we from time-to-time open our railway to the public and this we will be doing between 9th and 13th April 2008.

Up to 10 different Narrow Gauge engines will be steamed throughout the Festival with visitors and enthusiasts being given an opportunity to familiarise themselves with not only the railway but all aspects of the Sandstone Heritage Trust preservation programme. Regular guided tours will be held of all items in our collection.

A special highlight will be the Reefsteamers steam hauled passenger train from Johannesburg which will provide an opportunity for visitors to see some of South Africa's biggest steam locomotives in operation on the Eastern Free State line.

For accommodation in the Eastern Free State
